It is also a fact hard to dispute that the fewer suits you have in your wardrobe the more you will have in your pocket.

## Now you can get yeast the way you want it

For the first time you can get a pure whole yeast in agreeable and convenient tablet form

Of surpassing interest to you thousands of men and women who understand the remarkable health-building properties of yeast is the knowledge that you can now get yeast the way you want it.

Ever since the therapeutic value of yeast was definitely determined by leading scientists, there has been an insistent demand for a pure whole yeast of high vitamin potency—that would keep that would be easy and agreeable to take; that could be conveniently carried about in the pocket, and, finally, that would not form gas nor cause flatulence or belching.

In Yeast Foam Tablets these demands have been met.

**A food—not a medicine**  
Yeast has within itself the amazing therapeutic element, vitamin, the corrective properties of which are more as astounding than any known drug or medicine.

If you wish to take drugs or medicine, do so on the advice of your physician. If you wish to take a supplementary food,

for its tonic action on the whole body, take pure, whole, concentrated yeast—Yeast Foam Tablets.

**What this new yeast does**

"Foods which lack vitamin will not maintain health," says a noted medical authority, "and many foods which originally contained this element reach our table with all vitamin eliminated, due to various heating and preparing processes."

The vitamin thus eliminated is restored through the addition to your regular food of Yeast Foam Tablets. They stimulate the appetite, aid digestion and enable the body to convert food into firm, healthy tissue.

**What to take Yeast Foam Tablets for**

For that ill health, commonly known as a run-down condition, and all its distressing symptoms such as sluggishness, anaemia, failing strength and endurance, lost appetite and malnutrition,

you will find nothing more efficacious than a prompt treatment of Yeast Foam Tablets. They are sold by all druggists.

Northwestern Yeast Co., Chicago  
Makers of the famous baking yeast,  
Yeast Foam and Magic Yeast.

**Extraordinary advantages of Yeast Foam Tablets**

The only pure whole yeast in easy-to-take tablet form. They contain no drugs or other ingredients. They do not form gas nor cause belching.

They are the only pure whole yeast suitable for children; they do not cause fermentation. Each lot is tested to insure high and uniform vitamin potency.

**Yeast Foam Tablets**

the only pure whole yeast in convenient tablet form

## INSECT ENEMIES OF HOME GARDEN

Some of Pests Devour Nearly Every Form of Vegetation and Do Immense Damage.

### CUTWORMS INJURE TOMATOES

Arsenic and Paris Green are Deadly Poisons and Must Be Handled With Great Care—Rotation of Crops is Advisable.

(Prepared by the United States Department of Agriculture.)

From the standpoint of their food plants, injurious insects may be grouped roughly into two classes: First, those which are choice feeders and ordinarily attack only a single crop, or crops of a single class, although when they are extremely abundant they may resort to other crops or weeds. Examples are the asparagus beetle and asparagus miner and the large tomato worms, which confine their feeding to plants of a single family. Second, those known as general feeders—insects which are not particular as to their food plants. Some of these devour nearly every form of vegetable that grows in the garden. These include cutworms and other caterpillars.

The Common Wireworm—A, Adult; B, Larva; C, Last Segment of Same; D, Pupa—All Enlarged.

several forms of leaf-beetles and flea-beetles, plant-lice, thrips, blister beetles, and others. When abundant, some of these pests do great damage, sweeping over large areas and ruining entire crops before they can be stopped.

**Cutworms.** Tomatoes, sweet potatoes, and other truck plants, particularly when started under glass, are likely to be injured by cutworms when transplanted. These appear in great numbers in the spring and early summer, and the injury is often complete before the gardener notices it. The chief injury is due to the severing of the stems of young plants at about the level of the ground. One cutworm can destroy many plants in a single night by cutting off more than it can devour.

**Control.**—The best remedy is what is called "poisoned bait." For use in a small garden take 1 peck of dry bran, add 4 ounces of white arsenic or Paris green, and mix thoroughly with 2 gallons of water in which has been stirred half a gallon of sorghum or other cheap molasses.

For a large garden, use 1 bushel of bran to 1 pound of the arsenical mixed

The Ash-Gray Blister Beetle.

with 8 gallons of water containing half a gallon of molasses. This is enough for treating 4 or 5 acres of cultivated crops.

After the mash has stood for several hours, scatter it in lump the size of a marble over the garden where the injury is beginning to appear and about the bases of the plants set out. Apply late in the day so as to place the poison about the plants before night, which is the time when cutworms are active. Apply a second or third time if necessary.

It is advisable to keep young children, live stock, and chickens away from this bait.

Clean cultural methods and crop rotation are advisable, as are also to prevent recurrences of worm attacks. Experienced growers become expert in detecting cutworms and remove them by hand. This often can be done with profit on small patches.

**White Grubs.** When new land is used for planting vegetables, especially land that has been in sod or grown up with weeds, white grubs are almost certain to make their appearance, sometimes in large numbers, doing great damage to plants from the time they attain any growth until the fruit is ready for harvest. They feed chiefly on roots and attack especially potatoes, corn, and strawberries, but they are general feeders. White grubs, or "grub worms," are the larvae of the brown May or June beetles, with which most persons are familiar. The beetles occur in the North as late as August, while in the South they appear in April or earlier.

**Control.**—Deep plowing is the most effective remedy for white grubs. Cross plowing and deep disking are sometimes necessary, and the ground should be disturbed often and kept clean of weeds so that the grubs can be eliminated.

Rotation of crops, avoiding the planting of potatoes, beets, sweet corn, and other crops on land which has been for some time in the same crop or in strawberries, grasses, or weeds is advisable. Fertilizers, especially kailut, as a heavy top-dressing are of benefit. Gasoline is valuable. If, however, the run of the newly plowed garden, or when the crop is off, will eat large numbers of grubs. Domestic fowls will pick up grubs on newly plowed land. See Farmers' Bulletin 543, "Common White Grubs."

**Wireworms.** Wireworms, like white grubs, are common pests in the garden and are also general feeders. They are the offspring of snapping beetles, or "snap-bugs," and are of long oval form. Their tastes are similar to those of the white grubs. They attack and often do great injury to potatoes and other plants bearing tubers, as well as to carrots, beets, sweet potatoes, and onions.

**Control.**—The remedies advised for white grubs apply also to wireworms, with due care in selecting land for planting and in fall plowing and crop rotation. Wireworms, however, are much more difficult to control than white grubs.

**Blister Beetles.** Blister beetles are common farm pests and are very destructive to vegetables, especially beans, peas, potatoes, and beets. They travel in the same manner as army worms and are sometimes called "army beetles" for this reason. They are hungry feeders and travel frequently in lines, eating everything in their path, chewing up apparently more than they need for food. They are slender in form, somewhat soft bodied, and colored variously. Some species are perfectly black, some are yellow with black stripes, others are of the same color with several light stripes, some are gray, and others are gray spotted with black. Blister beetles are particularly abundant in the Southwest, but occur practically everywhere. Different species appear at different times, usually after the plants have made about one-third growth, and they continue until late in the season.

**Control.**—Lead arsenate applied at the very outset of attack is the best remedy. In some portions of the Southwest lines of men and boys go through fields driving beetles before them until they reach windrows of straw, or other dry vegetable matter previously prepared along the leeward side of the field. The windrow is then fired and the beetles burned.

**Plant-Lice.** Practically all vegetables, especially cucumbers, cabbages, and peas, suffer considerable damage from attack by small, soft-bodied insects commonly called "lice" or "aphids," but better known as plant-lice. These work for the most part on the lower sides of the leaves, which become curled or otherwise destroyed by loss of their vital juices. They give off a sweet mixture called honeydew, which attracts ants, flies, and other insects.

Plant-lice increase with great rapidity by the female giving birth to living young. The different kinds vary in color from light to dark green or nearly black, grayish, brown, yellow, and red. They have comparatively long legs and have feelers attached to the head. Some have two pairs of transparent or clear wings. They feed by sucking juices of the plants through a beak. Familiar examples are the melon aphid, pea aphid, and cabbage plant-lice.

**Control.**—If the plants are grown under glass, plant-lice may be killed by fumigation with a nicotine preparation. The form suitable for this work is paper soaked in nicotine which when lighted causes a smudge. Sprinkling plants with the tobacco dust is of some value, especially if applied early in the morning when the dew is on.

### SOY BEAN IN CROP ROTATION

Cash Value of Seed is Sufficient to Warrant Growing Beans as One of Main Crops.

The soy bean may be combined advantageously in many systems of crop rotation. The United States Department of Agriculture says it is especially adapted to short rotation, taking either an entire season or part of a season following some grain crop. The cash value of the seed is sufficient to encourage growing the beans as one of the main crops. When the whole season is thus devoted to soy beans, they take any place in rotation system where corn can be used.

### To Welcome Easter.

Let us welcome Easter with Joy. It is a day of commemoration of our redemption from sin and death, and which gives assurance of our immortality. Let us bring our tributes of roses and lilies, violets and jonquills and hyacinths, perfect first-fruits of earth's rarest blossoms of the spring-time, and types of the cleansed, purified perfection which we ourselves will show forth when we are "risen with Him," who is the Resurrection and the Life.

## THE BUSINESS OUTLOOK

By A. L. Whitaker  
President The Whitaker Paper Co.  
Business, like nations, will survive or perish, according to the clarity of their vision, the rectitude of their purpose and the stamina of their people, rather than as the result of fortuitous circumstances incident to international stability and plenty.

No nation can enjoy real prosperity until it has a market for the surplus of its production over and above what its own people consume. Until the grain and beef from our Western lands, the machinery, shoes and clothing from our Eastern mills, the cotton from Dixie, the automobiles from Michigan can be exchanged for the products of the lands across the seas, we, as a nation, may survive in moderate physical and material comfort, even though the northwestern farmer may burn the corn that he cannot sell in Liverpool.

But no real prosperity can come to speed the wheels of industry until some means be developed for the rehabilitation of foreign credits. Until the buying power of Europe, including Russia and Germany, shall be firmly reestablished, prosperity in America will of necessity be individual as at no time in the industrial epoch that began with the Spanish war and ended with the world war.

**THOSE WONDERFUL C A L I FORNIA HERBS CURED HER AND THE NEIGHBORS OF RHEUMATISM**  
Minburn, Iowa, May 6th, 1920  
Rheumatism Herb Co., Ocean Park, Cal.  
Gentlemen:—My mother is suffering dreadfully with rheumatism. We have tried doctors, all sorts of patent medicines and liniments, but no relief, and my sister-in-law (Mrs. W. F. Antle of Norwalk, Iowa) wrote me and told me to get a pound of your Herbs, for she knew it would do wonders for my mother. SHE SAID IT CURED HER AND SEVERAL OF HER NEIGHBORS. Please send it as quickly as possible. Very respectfully, Mrs. E. M. Jones.  
Send for free Booklet of letters from people all over the U. S. testifying to the wonderful results of these Herbs. Men and women agents are building up a good business selling them. Agents wanted everywhere. Price \$1 pound postpaid.

### PUSHING ROAD CONSTRUCTION

Marked Improvement in Economic Conditions for Highway Building in United States.

Economic conditions for highway building in all parts of the United States have shown marked improvement. Railroad facilities for handling road-building material are much improved. Labor conditions have been such as to aid road building. The increasing number of unemployed men and the depression generally causing more men to be thrown out of employment, have been favorable to contractors in pushing road construction.

**CIRCLER**  
MORE THAN A BRASSIERE  
NO. 1111  
STANDARD QUALITY  
PRICE \$1.00  
The Circler is more than a Brassiere. It's Self-Adjusting and simply slips over the head, clasps at the waist and under-arms and smooths out ugly lines. If your dealer can't get it send actual bill to us, name, address and \$1.00. We'll send the Circler prepaid. Sizes 34 to 48.

**Columbia Dry Batteries**  
work better and last longer  
—for bells and buzzers  
—for thermoses  
—for gas engines  
—for dry battery lighting in closets, cellar, garage, barn, etc.  
—for ignition on the Ford while starting  
The world's most famous dry battery. Used where good individual cells are needed. Rechargeable Spring Clip Binding. Fasts at no extra charge.  
**No. 6 COLUMBIA IGNITION BATTERY**  
For doorbells, buzzers, thermostats, and alarms, use one Columbia "Bell Ringer" or two Columbia "No. 6" Batteries.  
For ignition on gas engines and tractors, use Columbia "Hot Shot" Ignition Battery No. 1461. Full power when you need it most, while starting. For quick starting ignition on Fords, use the same size Columbia "Hot Shot" Ignition Battery No. 1461. Saves your back, temper, and time. Fits under the front seat.  
Sold by electricians, auto supply shops and garages, hardware and general stores, and implement dealers. Insist upon Columbia.

**Columbia Dry Batteries**  
—they last longer

## DOES LAWN NEED LIME? A SIMPLE TEST SHOWS

Does your lawn need lime? A simple method of determining is the litmus test, which is recommended by the Ohio Experiment Station, Wooster.

Insert a strip of blue litmus paper, procured at a drug store, in a cut an inch deep in the soil, made with a clean knife blade when the soil is wet. Press the soil around the paper; after five or ten minutes remove the paper. If the soil needs lime the litmus paper in contact with the ground will have turned to pink, while if no lime is needed the color will only be darkened due to the paper being wet. If the soil is dry a stiff paste may be made in a clean dish and the paper inserted in this paste. Fifteen to twenty pounds of builders' lime per square rod or double the quantity of finely-ground raw limestone may be used, sowing the lime broadcast over the surface and raking it on. Three to five pounds of acid phosphate or steamed bone-meal per square rod may be used as a fertilizer.

The Wauseon man who takes no interest in town improvement is stealing a ride on the chariot of progress.
